

Pat F de T be Sea e M d e

D

$B_p = P + F_p$ (M)

where B_p is the total force applied to the specimen, P is the force applied to the specimen, and F_p is the force applied to the specimen.

$B_p = P + F_p$ (M)

where B_p is the total force applied to the specimen, P is the force applied to the specimen, and F_p is the force applied to the specimen.

Sc e & A ca

where B_p is the total force applied to the specimen, P is the force applied to the specimen, and F_p is the force applied to the specimen.

where B_p is the total force applied to the specimen, P is the force applied to the specimen, and F_p is the force applied to the specimen.

where B_p is the total force applied to the specimen, P is the force applied to the specimen, and F_p is the force applied to the specimen.

where B_p is the total force applied to the specimen, P is the force applied to the specimen, and F_p is the force applied to the specimen.

where B_p is the total force applied to the specimen, P is the force applied to the specimen, and F_p is the force applied to the specimen.

where B_p is the total force applied to the specimen, P is the force applied to the specimen, and F_p is the force applied to the specimen.

where B_p is the total force applied to the specimen, P is the force applied to the specimen, and F_p is the force applied to the specimen.
